Title : “Branding Sculpture among Bangladeshi people”

1.0 Introduction

1.1. Focus Area

There is a misconception among citizens about professional life in Bangladesh. Everyone wants so badly to be an engineer or a doctor. These two careers are the definition of success. People frequently fail to think beyond the box on this cutthroat day. The majority of people don't even think of sculpting as a profession. We will understand the significance of sculpture if we broaden our perspective. Therefore, the primary goal of this research is to clarify the citizens of our country about the relevance, advantages and bright prospects that lie ahead. They will undoubtedly be inspired if they are knowledgeable enough about the subject. As a result, they will inspire other people as well. And in this way, sculpture's significance will grow throughout the nation and become a subject of serious consideration.

1.2. Context

A significant part of depicting the historical identity of ancient Bangladesh has been done via sculpture. Despite the fact that sculpture in Bangladesh dates back almost 2500 years, its greatest period of development was during the early Middle Ages, specifically the Gupta, Pala, and Sena dynasties. But with the passage of time, the practice of sculpture is disappearing. The competitive mindset of the modern period is the crucial root of this. To make more money and succeed more, people prefer to work for legitimate businesses. People lose sight of their passion for a certain subject because they are so preoccupied with this particular competition. This dogmatism is caused by a lack of knowledge and a rigid perspective.

1.3. Topic Relevance

Despite a long history of sculpture in Bangladesh, we are not continuing the tradition. Less people know about sculpting as art. Additionally, generally speaking, they see no opportunities for practicing sculpting art, which is incorrect. People are not sufficiently motivated to work in this particular area due to a lack of expertise or a restricted outlook. Because of the chains that our so-called society has established, even the passionate or interested people experience discouragement.

Therefore, the primary objective of this research is to find out what individuals think about sculpting and whether they foresee any career opportunities in this field in the future. If not, we shall go into sufficient detail about sculpture's advantages.

1.4. Research Objectives

- Explore the strategies that can attract more people to the sculpture art
- Identify the strategies that can motivate young people to work in the sculpture industry
- Examine sculptural artists' viewpoints on starting their own business
- Seek the possibility for sculpture to earn foreign currency
- Highlight the positive aspects of sculpture to the guardians

1.5. Research Questions

- What strategies can we use to attract more people to the sculpture art sector?
- What can we do to motivate youth to work in the sector of sculpture?
- What are the core components to encourage sculptors to start their own business?
- What are the methods we can follow to earn foreign currency through sculpture?
- What steps can be taken to explain the benefits of sculpture to the parents?

1.6. Scopes and Limitations

1.6.1. Scopes

- The popularity of sculpture will rise.
- Sculpture artists will have the chance to accurately assess their originality through publicity.
- Artists may find motivation to launch their own business.
- There will be a system for generating foreign income.
- Most likely, a new source of employment will emerge.

1.6.2. Limitations

- Since the majority of people in Bangladesh have little knowledge of art, they will not comprehend the importance of hand-made sculptures.
- The amount of money needed for sculpture would not be appealing to many individuals.

- Only a specific group of people would be willing to help with this effort.

2.0. Literature Review

Relevant previous researches are shown in this section.

2.1. Title : Applying the multisensory sculpture technique to explore the role of brand usage on multisensory brand experiences

Author : Fernando Rey Castillo-Villar, Ana Josefina Villasante-Arellano

Journal of Retailing and Consumer Services 57, 102185, 2020

Aim : For a favorable impact on consumer pleasure and brand loyalty, service companies have focused on the design and development of multimodal brand experiences. When designing multisensory brand experiences, the significance of brand usage and the use of efficient sensory evaluation techniques, however, have been disregarded.

Methodology : To discover and evaluate sensory data using multisensory metaphors, MSS, a qualitative methodology, was utilized as a study method. Customers of a Mexican sushi restaurant with a strong brand and an emphasis on sensory experiences were specifically targeted by the MSS method.

Findings : The primary goal of this research was to analyze, using the MSS approach, the brand sensory experiences of both heavy and light consumers of a service brand. Understanding the importance of sensory experiences to interactions between customers and brands required a theoretical investigation of the brand experience literature.

2.2. Title : The Contribution of Sculpture and Public Art to the Visitor Experience: A Case Study of Wellington in New Zealand

Author : 오정근

호텔관광연구 13 (3), 32-42, 2011

Aim : This exploratory study tries to pinpoint the contributions that sculpture and public art make to the experience of tourists in Wellington, New Zealand.

Methodology : Visitors who expressed interest were surveyed using an intercept questionnaire, and both quantitative and qualitative data were evaluated. It also explored how Wellington's public art relates to civic identity, destination image branding, and urban and cultural tourism.

Findings : The visitors surveyed were overwhelmingly in favor of public art and thought Wellington's sculptures were intriguing, despite not necessarily being typical of the city. The study found that public art strengthens Wellington's reputation as an art city and a cultural center while also improving the visiting experience.

2.3. Title : Sculpture and the public spaces: Towards enhancing the aesthetic quality of the built environment

Journal : OWOADE, W. L., & ADESANYA, C. O. (2022). SCULPTURE AND THE PUBLIC SPACES: TOWARDS ENHANCING THE AESTHETIC QUALITY OF THE BUILT ENVIRONMENT. Sculptors Association of Nigeria, 1(1).

Aim : In this article, OWOADE, W. L., and ADESANYA, C. O., highlight and tell people that sculpture is important in people's lives; it has a lot of role in the environment; and this sculpture has a lot of roles in urbanization. It can also help people better comprehend a place's history and culture.

Methodology : The research approach used in the study is qualitative. Data were gathered through observation, interviews, and written items including diaries and photographs.

Findings : According to the publication, the importance of sculptures in public areas extends beyond beautifying the surroundings; they also provide people with psychological and emotional relaxation as well as a sense of pleasure, and as a result, they should be supported. This essay explores the potential causes of the sparse presence of sculpture in built-environment public areas as well as the reasons for the city of Kaduna's lack of significance for sculpture. It was found that the idea of sculpture has important significance with regard to public areas, the built environment, and human life. Integration of sculpture into the public realm may transform the area and be extremely beneficial for place-making, urban planning, and tourism.

2.4. Title : Understanding the impact and value of temporary public art sculpture trails

Author : John Thompson, University of Huddersfield, Queensgate, Huddersfield HD1 3DH, UK.

Aim : The objective of the research paper is to track the history of temporary sculpture methods for public art, sort them into several categories, assess their worth for various stakeholders, talk about their diverse effects, and provide a conceptual impact model. The authors seek to analyze the temporary sculpture trails (T-Pasts): their nature, results, and influence as a complementary event to permanent artworks and sculptures.

Methodology : It is a mixed qualitative and quantitative research that uses the methodology of this research paper involving a combination of personal observations, secondary sources, and interviews. The researchers collected information through press announcements, news stories, and activity on social media. The authors also visiting several public art sculptures throughout the UK and abroad, notably in America, and formed their own conclusions from these travels. The researchers used documented evaluation, which made use of quantitative metrics, albeit these measurements do not provide a whole effect assessment. The researchers also used publicly available data on the sums that auctions have helped collect for charitable causes.

Findings : The research examines the characteristics, results, effects, and significance of temporary public art sculpture trails (T-Pasts), which have been in use for more than 20 years globally for fulfilling several objectives such as generating revenue, contributing to place branding, providing entertainment, and raising funds for charitable causes. T-Pasts feature various themes and apply mostly the same underlying operational business model.

2.5. Title : Culture Through Sculpture: Carving New Understandings and Uses of Campus Sculptures

Author : Rodezno, S. A. (2011). Culture Through Sculpture: Carving New Understandings and Uses of Campus Sculptures. The Vermont Connection, 32(1), 10.

Aim : This effort aims to build a more welcoming and varied campus community by facilitating interdisciplinary dialogues on art, history, and culture through the lens of sculpture. This project intends to create a dynamic and interactive learning environment that encourages critical thinking and cultural awareness by interacting with sculptures in fresh and creative ways.

Methodology : A mixed-methods strategy will be used for the investigation. Students, faculty members, and guests to college campuses are going to be the topics of focus groups and semi-structured interviews that are being utilized to collect qualitative data. Surveys will be used to acquire quantitative data to learn more about the participant demographics and how they feel about the sculptures on campus. In order to examine the historical context and aesthetic inspiration for the sculptures, archive research will also be done.

Findings : Generally speaking, sculptures can significantly influence a university's culture and operate as a tangible expression of its principles, beliefs, and past. They can act as a starting point for conversations on art, history, and the significance of public spaces. Sculptures can also

be an effective tool for creating a sense of community and belonging among visitors, faculty, and students. In order to foster understanding and acceptance, sculptures can serve as a visible reflection of the various cultures and ethnicities present on a university campus.

3.0. Research Design

3.1. Research Methodology

To attain its objectives, the research will use Qualitative Method.

3.2. Research Approach

Single Focus Group Discussion : To explore a specific topic of interest, people with similar backgrounds or experiences are brought together for a focus group discussion. It is a type of qualitative research in which participants are questioned about their perspectives, attitudes, beliefs, opinions, or ideas regarding the job opportunities that can be created through sculpture. We believed that the focus group would be the best way to learn more in-depth information about our audience, their behavior, and the motivations behind their purchasing choices. Additionally, it would reduce time and enable us to simply replicate across groups and locations while measuring responses as well as opinions.

3.3. Sampling

Systematic Random Sample : Providing knowledge about sculpture to Bangladeshi people is the goal of our research. One out of every ten people in the Bandarban area will be the one we talk to about this issue. This conversation will show us their viewpoint on this particular subject and broaden our knowledge.

- We will ask them about their ideas on the sculpture.
- We will inform them of some positive aspects of sculpture.
- We will take notes and datas.
- We will receive their feedback.

3.4. Timeframe

It will be challenging to locate parents in the Bandarban Area who are eager to discuss the subject. Additionally, people must first be motivated in order to engage in a candid conversation.

Due to the size and density of Bandarban, it will take us roughly 50 days to accomplish our goals.

We will need to analyze their states, prior studies, and a host of other things after this offline event, which will take about 5 months to accomplish.

3.5. Budget

The estimated budget for the research proposal is as follows:

The research itself will take at least five months to end. But to gather information the research will be conducted in Bandarban city for around 50 days :

- Transportation costs will be around 50,000 BDT
- Living costs will be around 150,000 BDT
- Nutriment costs will be around 400,000 BDT
- Medical costs will be around 20,000 BDT
- Back up costs will be around 100,000 BDT
- Single Focus Group discussion will take 300,000 BDT

So, in total, it will take around 10 lakhs BDT.
